

IS YOUR PET EXPERIENCING ANY OF THESE SYMPTOMS?

Patients are commonly misdiagnosed as pneumonia, as there are several similar symptoms including:

- Coughing
- Fever
- Weight loss
- Lack of appetite
- Lack of energy
- Abscesses and swelling under the skin

TALK TO YOUR VETERINARIAN ABOUT THESE AVAILABLE TESTS.

Early detection and accurate diagnosis are critical for improved outcomes. MiraVista Diagnostics offers several testing options for accurately detecting Valley Fever.

If you think your pet has Valley Fever, ask your veterinarian to order one of these tests:

- ***MVista® Coccidioides Canine Antibody IgG EIA***
- ***MVista® Coccidioides Antibody Immunodiffusion Tests***
- ***MVista® Coccidioides Quantitative Antigen EIA Detection Tests***
